CYRUS NOBLE MINE

Searchlight, Nev.

Stock promotion booklet

Publ. Searchlight, n. d., possibly ca. 1905

Copied by Arda Haenszel, with permission of owner,

Mrs. Orange M. (Eva) Waters

3164 Pershing Avenue

San Bernardino, Calif. 92405

REFERENCE NOTES

1. One of the owners and developers of the mine was J. J. Prendergast of Redlands.
2. There is some information on the great Quartette mine of Searchlight, along whose vein the Cyrus Noble was located. The Quartette once had a small railroad from the mine down to the Colorado River at Searchlight (now Cottonwood) Landing. The mill was first located beside the river, and was served by the steamboats.
3. The map shows the exact location of several other mines and mills in the area, such as the Duplex, which is still operating to some extent.
4. The booklet was printed by the Out West Printing Co. (Publisher of OUT WEST magazine? Lummis?)

1. The first of the two main parts of the report is the

introduction, which sets out the objectives of the study.

2. The second part of the report is the main body, which

contains the results of the study and the conclusions drawn from them.

3. The third part of the report is the conclusion, which

summarizes the findings of the study and makes recommendations for

future research.

4. The fourth part of the report is the bibliography, which

lists the sources of information used in the study.

5. The fifth part of the report is the appendix, which

contains supplementary material.

6. The sixth part of the report is the index, which

provides a guide to the contents of the report.

CYRUS NOBLE MINING COMPANY

oooooooooooooooooooo

SEARCHLIGHT MINING DISTRICT

LINCOLN COUNTY, NEVADA

"The Camp Without a Failure"

o o o o o

- 1 — A Company whose property is located on the famous Quartette vein, and has produced \$60,000.00 during development, and will be

"A DIVIDEND PAYER" SOON

- 2 — A Company whose property is fully paid for, with money in the treasury and no litigation.
3 — A Company that owns 162 acres and a 10-stamp mill.
4 — A Company that has no salaried officers outside of its Superintendent and men employed in the mine.
5 — A Company that appreciates the right of its stockholders to receive detailed reports, at regular intervals, showing the disposition of funds and progress of workings.

- 6 — A Company which recognizes the

CARLSEN-ETHEN COMPANY

as men of integrity and honesty in the community in which they reside, who know a mine when they see it, and are not merely professional stock-jobbers.

- 7 — A Company whose officers are men of esteem and integrity, and whose character is beyond reproach.
8 — A Company, in short, that believes in "the man behind the pick" rather than the man behind a glaring advertisement.

Location of Claims

THE property of the Cyrus Noble Mining Company is located in Section 34, Township 29 South, Range 63 East, M. D. M., and consists of ten claims and fractions, approximately 162 acres, of which five are patented, i. e., "CYRUS NOBLE," "CYRUS JR.," "BROWN JUG," "DIAMOND WEDGE," and "HORSESHOE." Surveyed for patent are "KING EDWARD," "DRAGON," "HERBERT," "FOUR ACES" and "GOLDEN CUP." It is bounded on the north by the Searchlight Parallel and Goodenough, and on the west by the famous Quartette and Duplex Mining Companies.

Undisputed veins of adjacent properties

THESE claims may truly be said to be the hub of the main ledges of the Quartette and Duplex mines. There is some dispute among mining men as to the general trend of the Cyrus Noble vein, but there is no difference of opinion among leading mining engineers as to the Cyrus Noble being the Quartette ledge, which has produced \$1,500,000.00, and has \$9,000,000 worth of ore blocked out.

Under- ground workings

EXPLOITATION is going on at the greatest speed possible. There are now 30 men working around the mine, and the main shaft, which is being enlarged to 7 x 9 feet, is down 500 feet. Sinking with three shifts will not cease until the 1000-foot depth is reached. Stations will be cut every 100 feet and drifts will be run both ways. This will add materially to the 2,000 feet of workings already performed in cross-cuts, drifts and up-raises, thus blocking out additionally huge bodies of excellent ore.

"This ledge, which is 50 per cent better than the Quartette was at the same depth" (according to Capt. Luxon's statement), should with greater depth far surpass this wonderful bonanza.

Other veins

UNMISTAKABLY there can also be traced in the Cyrus Noble ground the main vein of the Duplex Mining Company, which has produced \$300,000, and has been acquired recently by *John Brockman*, the millionaire mine-owner. It likewise contains the *Goodenough Vein*, which shows free-gold ore at the surface.

Values

IT IS ESTIMATED on a conservative basis, that from the main shaft through which the Company is to this day conducting all its development work, over 60,000.00 has been taken out, and \$500,000.00 worth of ore has been blocked out. Returns of shipments to Sebby's smelter will show a net return of \$103.72 per ton, some high grade streaks running as high as \$10,000.00 per ton. But a conservative average of the entire ledge, which is from 4 to 32 feet in width, is \$56.00 per ton. The ledge

emphatically increases in size and value as depth is reached, and is free-milling. While we do not promise to find \$20.00 gold pieces with depth, we do state that an excellent profit can be made, with an unlimited amount of good ore, whose cost of mining and milling is only \$4.00 per ton.

Surface improvements

A NEW ten-stamp mill has just been completed at the cost of \$15,000 being of the most modern type, and having everything necessary for the complete extraction of gold. Among the other buildings that give the ground an appearance of good substantial mining operation are the Manager's home, the Superintendent's home, the assay office, a well-equipped black-smith shop, hoist house, store rooms and other such buildings as are essential for good successful mine operation.

Capable management

THE directorate assures its stockholders of proper administration of the company's funds and affairs.

The Money Must and Will go into Extensive Development

By this means the small stockholder can share in the dividends as well as the capitalist.

Capt. Luxon, who for three years served in the capacity of Mine Superintendent in the Quartette mine, is now in charge of the "**Cyrus Noble**," Chas. M. Egge, recent foreman of the Montgomery Shoshone mine, is acting in the same capacity in the "**Cyrus Noble**." John Bowden, the mill man, has been employed for 14 years in the famous Utica mine in California.

With such management as this, we see nothing but successful mining operation.

Valuation

THE Cyrus Noble owns 162 acres, most of which are adjacent to the Quartette, with the Quartette ledge to work on, and the price that this famous property is selling at to-day, the Cyrus Noble should rise above par, i. e., \$1 00, in the very near future. The Quartette property carries a valuation of \$15,000,000, the stock selling strong at \$15 per share: and there is no question but that it is worth intrinsically much more than that figure. Therefore, with these **Facts** in view, also that the Cyrus Noble has produced \$60,000, and has \$500,000 worth of ore blocked out, this property will bear watching. If you have already done so, you will find every statement made by us correct, for we have not taken into consideration the increased facilities for transportation by railroad in the very near future, this being another assured **Fact**.

Buy now,
before price
is advanced

OUR PREDICTION

THIS property was thoroughly examined by our own engineer before being put on the market. Upon his enthusiastic report we secured a limited number of shares of treasury stock (**100,000**), the proceeds of these to be put into the ground. We are sufficiently impressed with the possibilities of this property to **invest our own money in it**, and have secured the only treasury stock on the market. We can conscientiously recommend this as an exceptional investment, either to hold permanently or for a rapid advance in price. We want to make money for you, and give you the benefit of our judgment, as that is the only way to hold you as one of our financial clients; for we want your patronage, not only to-day, but to-mor-

Dividend

row next year, and continue so long as we "make good." We are not selling you a prospectus, as is very often the case, but say to you, **Investigate it thoroughly**, for we are confident that you will then join us.

We know what this stock is going to do, and know emphatically when **we predict a dividend** not later than July, 1906, or possibly earlier.

Therefore, wire us for a block of this stock, and it will make you our **client and friend**.

GEOLOGY

THE geology of the district is identical with that of Comstock, Tonopah and Goldfield, all being on the same Andesitic formation, commonly known as brecciated or "lode porphyry." That the mines are permanent and the ledges improve in values and size has been proven by actual work by such mines as the Quartette, which is 1000 feet deep.

The Duplex.	700 feet deep	Santa Fe,	200 feet deep
Pompeii.	350 feet deep	Good Hope,	500 feet deep
Blossom.	425 feet deep	Le Roy,	350 feet deep

and others, which are too numerous to mention.
